

No-code solutions for digital health

A Swiss approach to holistic health

The Inventify approach allows healthcare providers, medtech companies, and researchers to co-create digital solutions for tomorrow.

Based on expertise. Focused on outcomes.

Turn your expertise into outcome-focused solutions

Digital health trends are converging

Growing Ecosystems

Collaborators require easy, fast, and secure data sharing to deliver end-to-end solutions.

Merging silos

With treatment and research no longer separated, data orchestration is needed.

Prioritised patient outcomes

Next-level transparency and data sovereignty support patients' best interests.

Increasing Regulatory Requirements

Mounting regulations (e.g. GDPR) demand a new solution development approach.

It's time for a more holistic approach to health

Inventify's codeless platform allows users to build digital products and ecosystems without writing a single line of code.

Inventify accelerates your innovation so you can keep patients first

Key Features

01

Expertise in patient health captured through drag-and-drop configuration, not coding

02

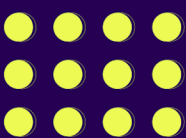

Parties collaborate and transact on one common platform; data is fully encrypted

03

Fully-managed, cloud-based platform maintains customisations across software updates

Can Inventify help your innovation project?

☐

Do you need support to guarantee your medical-grade (software) project is regulatory compliant?

☐

Does document processing and stakeholder coordination slow down your progress?

☐

Does complying with data protection and approval requirements take more time than the solution development process?

☐

Would you like to make your new solution available to partners and/or startups?

☐

Are you eager to do more with the data you already have?
